

OPPORTUNITIES CHECKLISTS — SAG₃

Eco-efficiency resources for the food processing industry

These checklists are a component of the eco-efficiency self assessment guide for the food processing industry and should be used in conjunction with the Six-step checklist (SAG₁), Worksheets (SAG₂) and eco-efficiency fact sheets. They have been compiled to assist food processors in identifying eco-efficiency opportunities in their factory. More information on most of the opportunities listed here can be found in the accompanying eco-efficiency fact sheets.

The following Opportunities checklists form part of this series:

- **Water and cleaning** eco-efficiency opportunities
- **Wastewater** eco-efficiency opportunities
- **Energy** eco-efficiency opportunities
- **Utilities** eco-efficiency opportunities
- **Solid waste** eco-efficiency opportunities
- **Packaging** eco-efficiency opportunities

Visit the project website www.ecoefficiency.com.au for more ideas and case studies.
